

ABSTRACT

A unique painting process and an associated kit including the materials required for practicing the method. The method includes the acts of preparing a protective covering on a work surface, preparing a background media by
5 placing it on the protective covering on the work surface, placing a reservoir on the protective covering, filling the reservoir with a paint, dipping the posterior of the infant in the paint, and stamping the posterior on the background media to create stamping prints. The kit of the present invention includes a flat, flexible backing piece, a protective cover folded into a compact
10 size attached to the backing piece, a plurality of paint bottles attached to the backing piece, a plurality of reservoirs attached to the backing piece, a plurality of painting tools attached to the backing piece, and a plastic cover having a periphery, the plastic cover positioned over the protective cover, plurality of paint bottles, plurality of reservoirs, and plurality of paint brushes,
15 and attached around its peripheral edge to the backing piece.
